

TRACK SYSTEMS SMART SOLUTIONS

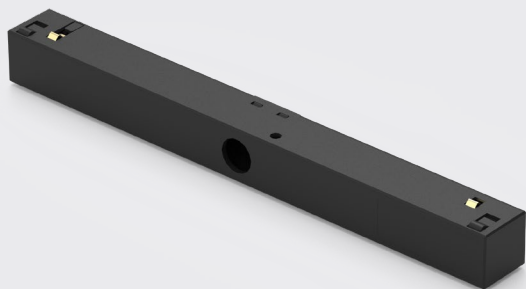

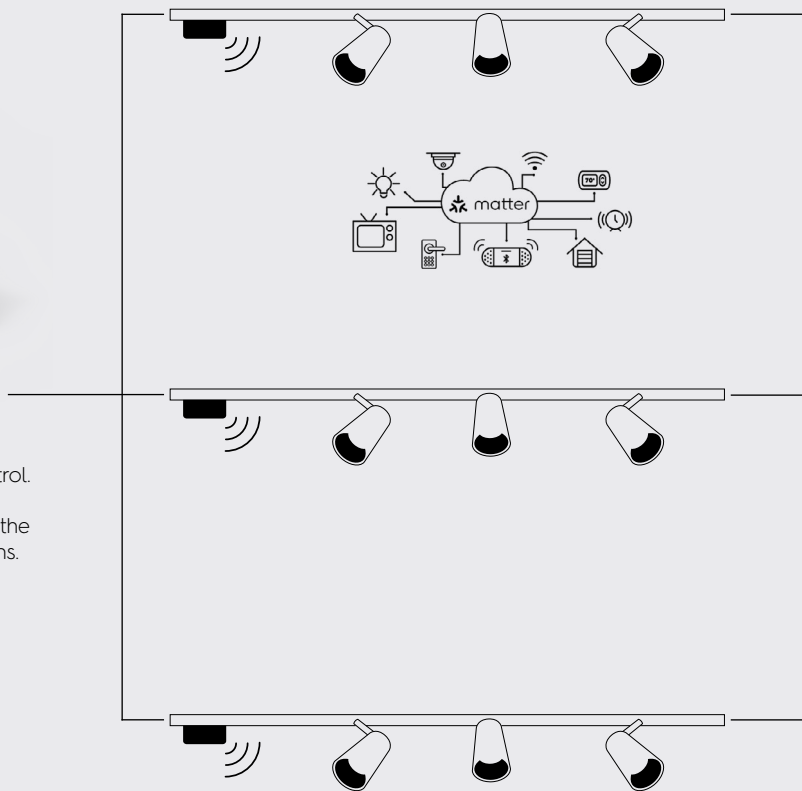

A.A.G.
STUCCHI

EUTRAC

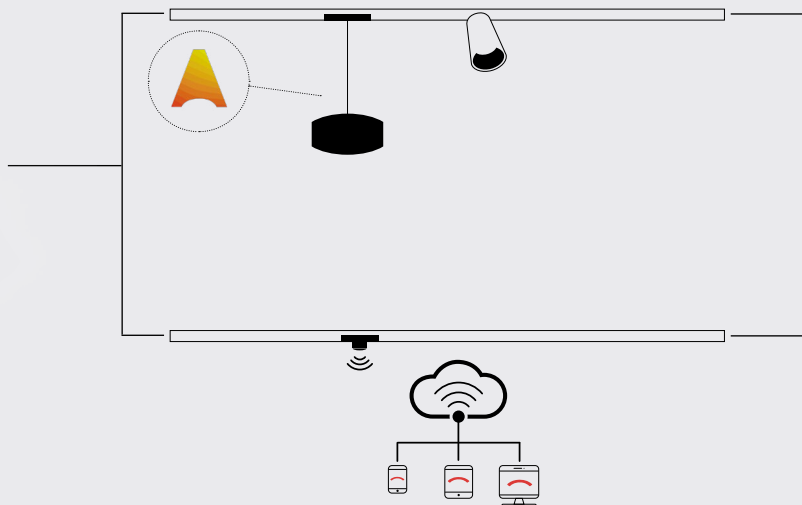

Main voltage or **low-voltage** smart box can incorporate different smart technologies for light control.

Simply inserting it into the track it carries the signal to all the lighting fixtures, without any wiring or mounting operations.

Adapters can be used to connect smart devices to the track for installation and electrical connection.

PROLICHT

matter

Prolicht works with Matter

Matter is a communication protocol for Internet of Things (IoT) devices and it is a collaboration between several technology companies, including Apple, Amazon, Google, and the Zigbee Alliance.

MATTER allows to connect compatible devices and systems with one another. PROLICHT, was one of the first companies to complete adaptations of its product families and is now ready to deliver products that work with MATTER. Thanks to Prolicht MATTER to DALI bridge inserted into A.A.G. Stucchi smart box, track systems can also work with MATTER.

MATTER smart device

Air monitor quality

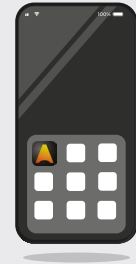

Air and Lux monitoring device with Casambi Ready programmable keypad MAQ, checks the indoor air quality by giving immediate visual feedback through the RGB status colors. The integrated brightness sensor saves electricity thanks to automatic adjustment of lights which can be controlled and configured into scenery all through the Casambi technology and App but also, once configured, through the use of the 3 touch buttons on the body.

CASAMBI

Lighting control for the modern world

Casambi is a wireless lighting control system that uses Bluetooth Low Energy (BLE) technology to connect and control various lighting fixtures and devices. It allows users to manage their lighting systems via a smartphone app or a wireless switch, enabling individual and group control, dimming, and scheduling of lights. Casambi is popular for its flexibility, energy efficiency, and ease of use.

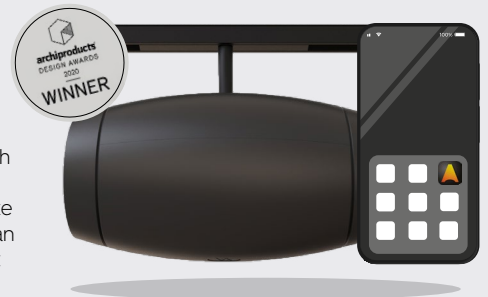

VAIRUS

A powerful device for a better air quality

VAIRUS is an innovative photocatalytic oxidative air purification system which aims to improve and maintain indoor air quality.

The product uses an advanced technology that, effectively allows to oxidize and destroy airborne pathogens. Being a completely harmless system, it can be used continuously and also in the presence of people. With a compact and sophisticated design, VAIRUS provides for the possibility of being integrated also with track lighting systems, making it a very versatile product.

sentistic

Experience the power of AI for Presence Sensors

Using cutting-edge technology, the Sentistic OMNI Track sensor detects presence without false triggering and counts, locates, and tracks people anonymously to enable you to get the most out of your space.
